## PROFILE

Computer Engineering student at Gazi University (GPA 3.24/4.00) focused on backend development with C# and ASP.NET Core. I build applications end to end — REST API, PostgreSQL database and React interface — add authentication, automated tests and Docker packaging, and deploy them to a live server. Looking for a .NET / full-stack software engineering internship.

## PROJECTS

**TaskFlow — Task Board (Mini Trello),** *C#, ASP.NET Core, Entity Framework Core, PostgreSQL, React, TypeScript, Docker*

- Built the REST API with ASP.NET Core Minimal API and EF Core on PostgreSQL: projects and tasks, FluentValidation request validation, a service layer, global error handling that returns ProblemDetails, and rate limiting on login.
- Implemented JWT authentication with PBKDF2 password hashing and per-user data isolation (other users' records return 404), and a React 19 + TypeScript interface with a three-column drag-and-drop board and optimistic updates that roll back if the server rejects them.
- Wrote automated tests at three levels: xUnit integration tests with WebApplicationFactory, Vitest + React Testing Library component tests, and Playwright end-to-end tests.
- Packaged the app with Docker Compose and deployed it to an Oracle Cloud Ubuntu (ARM) server behind Caddy with automatic HTTPS and nightly database backups.

**RentGo — Car Rental Platform,** *ASP.NET Core MVC, C#, PostgreSQL, Razor*

- Implemented a car rental platform with role-based administrative permissions and access control.
- Kept data access and business logic decoupled with repository layers and DTOs; built the server-rendered UI with Razor.

**Inventory & Production Management System,** *Java, Spring Boot, PostgreSQL*

- Built a system that combines warehouse inventory tracking, production workflows and employee records in one application.
- Designed the RESTful services in Spring Boot on top of a normalized PostgreSQL schema.

**Other projects,** *Python*

- Warehouse route optimization: benchmarked A*, K-Nearest Neighbors and Simulated Annealing for pick-route planning.
- AI audio pipeline: chained voice cloning, sentiment analysis and accent conversion models into one workflow.

## EDUCATION

**B.S. in Computer Engineering,** *Gazi University* 09/2023 – Present
GPA: 3.24 / 4.00 | Ankara, Türkiye
**Relevant Coursework:** Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming

## TECHNICAL SKILLS

**Backend (.NET):**
ASP.NET Core (Minimal API, MVC), Entity Framework Core, FluentValidation, REST API design, Swagger/OpenAPI, JWT

**Tools:**
Git, Linux, Firebase, Android Studio

**DevOps & Databases:**
Docker, Docker Compose, PostgreSQL, Linux server deployment (Oracle Cloud), Caddy

**Programming Languages:**
C#, SQL, TypeScript, Java, Python, C/C++

**Testing:**
xUnit, Vitest, React Testing Library, Playwright

**Other frameworks:**
React, Spring Boot

## LANGUAGES

**English**
Professional working proficiency (YDS: 81.25)

**Turkish (Native)**
